New 4515 Sealant
Dual Purpose Sealant can be used for Pitch Pans and as a Repair Sealant

ELKHART, Ind. - Geocel, LLC launches Geocel 4515 Pitch Pan & Repair Sealant.

This new sealant has a dual purpose. Geocel 4515 can be used with most pitch pans as a pitch pan sealant and also as a sealant to repair seams, tears, and holes on EPDM, PVC, TPO and most roofing membranes in damp and dry conditions. Geocel 4515 goes down on most substrates without primers and cleaners. It saves costs by reducing the number of products needed and saves time by reducing the number of application steps. Packaged in 2 liter pour pouches and a weather resistant pail makes Geocel 4515 easy to carry on the job.

Founded in 1974, Geocel, LLC is an ISO 9001 Certified Company and has built a reputation as a leader in the manufacturing of quality sealants, caulks and adhesives. From general all-purpose jobs to tough construction and repair applications, Geocel offers solutions that meet the demands of the professional contractor as well as the individual property owner. For more information about Geocel, visit www.geocelusa.com.
